

Naturally occurring substance found in the body (skin, eyes, & joints)

Hyaluronic Acid (H.A.)

Hormone-Free Alternative

Some women cannot take hormones due to medical reason (i.e., cancer) and while others prefer not to use them

What Is Hyaluronic Acid?

Why Hyaluronic Acid?

H.A. helps with:

- cellular maturation
- lowering the pH level in the vagina
- vaginal atrophy(vaginal dryness)

H.A. aids in:

- forming an extracellular water film that moisturizes
- maintaining a water balance that helps with elasticity
- facilitating in the healing process and tissue regeneration

PRESCRIBING

Form

- Suppository
- Cream

Dosage

- 5 mg (most common)

Additions

- **Vitamin A** (can increase the function of the immune local cells and epithelium of the vagina)
- **Vitamin E** (antioxidant properties, also acts as anti-inflammatory and healing agent)

SIG

- One suppository vaginally every night for 14 nights, then one suppository every other night
